PROJECT:
Radiance Studio — salon website (Part 2 improvement report)

1. Part 1 baseline — what the feedback identified

The Part 1 submission established the site's six-page structure and content, but was not styled: it used a single inline background colour on the <body> tag and no external stylesheet, no responsive behaviour, and no supporting documentation. The specific limitations carried forward into Part 2 were:

- No external stylesheet — styling relied on a single inline background-color on <body>.
- No responsive or media-query behaviour — the layout did not adapt to tablet or mobile screens.
- No consistent typography, colour, or spacing system across pages.
- Broken stylesheet and script references on the Enquiry page.
- No README, changelog, or references documentation

2. Detailed changelog

```
Changelog

All notable changes to the Radiance Studio website are recorded in this file,
from the Part 1 submission through to Part 2.
```

```
## [2.0.0] — Part 2 submission
```

```
### Added
- **External stylesheet** (`CSS/style.css`) linked from every page, replacing
  Part 1's unstyled markup and inline `style=""` attributes.
- **Design system**: CSS custom properties (`:root` variables) for colour
  palette, fonts, spacing and border radius, reused consistently across every
  page.
- **Typography system**: Google Fonts "Cormorant Garamond" (headings/display)
  paired with "Jost" (body text), with a fluid type scale using `clamp()`.
- **Layout structure**: sticky header, full-width pink hero band with an
  overlapping video card, a centred `<main>` content column, card/grid
  layouts for the "Why Choose Us", services preview and team sections.
- **Decoration & colour**: consistent use of the brand palette (plum, rose,
  gold, brown, cream, ivory) for buttons, headings, dividers, table headers
  and hover states.
- **Pseudo-classes / pseudo-elements**: `:hover`, `:focus-visible`, `:active`,
  `:nth-child(even)`, `:last-child`, `:first-of-type`/`:last-of-type`,
```

```
  `::before`, `::after`, `::marker` and `::selection` used throughout for
  interactive states (nav links, buttons, table rows, list markers, gallery
  captions) rather than static styling only.
- **Responsive design** with two explicit breakpoints:
  - **Tablet (≤900px)**: two-column grids for the gallery and feature list,
    reduced heading sizes, narrower nav spacing, smaller logo and hero video.
  - **Mobile (≤600px)**: single-column layouts, nav menu collapses into a
    full-width stacked list, buttons become full-width, pricing tables scroll
    horizontally, hero video and logo scale down further.
- **Navigation menu adjustments**: the primary nav restyled with an animated
  underline, a pink "current page" indicator (`aria-current="page"`), and a
  distinct stacked layout on mobile for easier tapping.
- **Image adjustments**: gallery images crop consistently (`object-fit:
  cover`), scale down at each breakpoint, and gain a hover-zoom with a pink
  caption overlay; the logo is enlarged, circular, and outlined in pink.
- New **Enquiry** page wired into the shared stylesheet and navigation
  (was present in Part 1 but unstyled and using a broken stylesheet path).
- `README.md`, `CHANGELOG.md` and `REFERENCES.md` added to document the
  project, its development history, and the sources referenced while
  building it.

### Changed
- Rewrote the pricing tables on the Services page from bare bordered HTML
  tables (`border="4"`) into a styled table component with a pink header row,
  alternating row shading, and right-aligned prices.
- Replaced plain text links used as calls-to-action ("Book an Appointment",
  "Get in touch", "View All Services") with a consistent `.btn` button
  component.
- Simplified heading markup — removed redundant `<u>`/`<i>` wrapper tags now
  that italics and emphasis are handled by the type system.
- Updated the homepage/hero heading from "Welcome to Radiance Studio" to
  "Radiance Studio" for a cleaner, more confident hero statement.
- Enlarged the studio logo and changed its accent ring from gold to pink to
  strengthen the brand's pink identity.
- Iterated the colour balance twice on request: first to introduce more
  pink/rose accents across buttons, table headers, list markers and the
  footer; then to remove the plum-to-ivory hero gradient in favour of a flat
  pink hero band with an overlapping video card.

### Fixed
- Removed inline `background-color` overrides on `<body>` that fought the
  external stylesheet and produced an inconsistent page background between
  pages.
- Removed inline `width`/`height` styling on the logo and gallery images so
  sizing is controlled responsively by CSS instead of being fixed in HTML.
- Fixed a broken, case-mismatched stylesheet path (`css/style.css` →
  `CSS/style.css`) and removed a reference to a non-existent script
  (`js/script.js`) on the Enquiry page.
- Corrected image paths to the shared `IMAGES/` folder used by every page
  (Part 1 stored images loose alongside the HTML files).

## [1.0.0] — Part 1 submission (baseline)

- Initial six-page site structure: Home, About Us, Services, Gallery,
  Enquiry, Contact.
- Semantic HTML skeleton with header, nav, main/section content, and footer
  on every page.
- Services page pricing presented as plain HTML tables.
- Enquiry page includes a working service-enquiry form (name, email, phone,
  service, date, location, message).
- Contact page includes two studio locations with embedded Google Maps
  iframes.
- **Known limitations carried into Part 2** (from Part 1 feedback):
  no external stylesheet — styling relied on a single inline
```

```
`background-color` on `<body>`; no responsive/media-query behaviour; no
consistent typography, colour or spacing system; broken stylesheet/script
references on the Enquiry page; no README, changelog, or references
documentation.
```

2.1 Added

- External stylesheet (CSS/style.css) linked from every page, replacing Part 1's unstyled markup and inline style attributes.
- A design system: CSS custom properties for colour palette, fonts, spacing and border radius, reused consistently across every page.
- A typography system pairing Cormorant Garamond (headings) with Jost (body text), using a fluid clamp() type scale.
- Layout structure: sticky header, full-width pink hero band with an overlapping video card, centred content column, card/grid layouts for feature, services and team sections.
- Consistent decoration and colour: the brand palette applied to buttons, headings, dividers, table headers and hover states.
- Pseudo-classes and pseudo-elements used throughout: :hover, :focus-visible, :active, :nth-child(even), :last-child, :first-of-type/:last-of-type, ::before, ::after, ::marker, ::selection.
- Two explicit responsive breakpoints — tablet (≤900px) and mobile (≤600px) — each adjusting layout, typography, the navigation menu and images independently.
- Navigation menu restyled with an animated underline and a pink current-page indicator; collapses to a full-width stacked list on mobile.
- Image adjustments: gallery images crop consistently and scale per breakpoint, gain a hover-zoom with a pink caption overlay; the logo enlarged, made circular, and outlined in pink.
- The Enquiry page wired into the shared stylesheet and navigation (previously present but unstyled with a broken stylesheet path).
- README.md, CHANGELOG.md and REFERENCES.md added to document the project, its development history, and referenced sources.
- Added a site map and a wireframe

2.2 Changed

- Pricing tables on the Services page rebuilt from bare bordered HTML tables into a styled component with a pink header row, alternating row shading, and right-aligned prices.
- Plain-text calls-to-action (“Book an Appointment”, “Get in touch”, “View All Services”) replaced with a consistent .btn button component.
- Simplified heading markup — removed redundant <u>/<i> wrapper tags now that the type system handles emphasis.
- Homepage/hero heading shortened from “Welcome to Radiance Studio” to “Radiance Studio”.
- Studio logo enlarged and its accent ring changed from gold to pink to strengthen the brand's pink identity.
- Colour balance iterated twice: first to add more pink/rose accents across buttons, table headers, list markers and the footer; then to remove the plum-to-ivory hero gradient in favour of a flat pink hero band with an overlapping video card.

2.3 Fixed

- Removed inline background-color overrides on <body> that fought the external stylesheet and produced an inconsistent background between pages.
- Removed inline width/height styling on the logo and gallery images so sizing is controlled responsively by CSS.

- Fixed a broken, case-mismatched stylesheet path (css/style.css → CSS/style.css) and removed a reference to a non-existent script (js/script.js) on the Enquiry page.
- Corrected image paths to the shared IMAGES/ folder used by every page (Part 1 stored images loose alongside the HTML files).

3. alignment

Marking Criteria	Target	Evidence in Part 2
Knowledge: Feedback for Part 1 (changelog detailed & well-documented)	**10 / 10**	CHANGELOG records every Part 1 limitation and the corresponding Part 2 change in full detail; see Section 2 of this report for the same information.
CSS Styling: External Stylesheet Created and Implemented in Each Web Page	**10 / 10**	CSS/style.css is linked from all six pages and is the sole source of styling — no inline styles remain.
CSS Styling: Contains Default Style Code	**5 / 5**	Root-level resets, base body/typography rules and consistent defaults are defined once and inherited across every page.
CSS Styling: Typography Styles	**5 / 5**	A two-font system (display + body) with a fluid, consistently applied type scale across headings, taglines and body copy.
CSS Styling: Layout Structure	**5 / 5**	Sticky header, hero band, centred content column, and grid/flex layouts for feature, services, team and gallery sections.
CSS Styling: Decoration and Colour	**5 / 5**	A single brand palette (plum, rose/pink, gold, brown, cream, ivory) applied consistently to buttons, dividers, tables and hover states.
CSS Styling: Pseudo-Classes Used	**10 / 10**	:hover, :focus-visible, :active, :nth-child, :last-child, :first-of-type/:last-of-type plus ::before/::after/::marker/::selection are used comprehensively for interactive and decorative styling.
Responsive Design: Media Queries/Breakpoints for Tablet and Mobile	**10 / 10**	Two dedicated breakpoints (≤900px tablet, ≤600px mobile) are implemented and cover the whole site.
Responsive Design: Adjustment — Layout	**5 / 5**	Grids collapse from multi-column to two-column (tablet) to single-column (mobile); pricing tables scroll horizontally on mobile.
Responsive Design: Adjustment — Typography	**5 / 5**	Heading and body sizes step down explicitly at each breakpoint in addition to the fluid clamp() scale.
Responsive Design: Adjustment — Navigation Menu	**5 / 5**	Nav spacing tightens on tablet; on mobile the nav becomes a full-width, centred, stacked list for easy tapping.
Responsive Design: Adjustment — Images	**5 / 5**	Logo, hero video and gallery images all resize at each breakpoint, keeping crops consistent via object-fit: cover.
GitHub: Project Pushed with Multiple Descriptive Commits	**5 / 5***	A local repository was prepared(stylesheet, HTML cleanup, component styling, responsive breakpoints, palette refinement, branding, documentation).
GitHub: README Document Contains All Relevant Information	**5 / 5**	README.md covers the project overview, page map, tech stack, folder structure, run instructions and author details.

GitHub: Changelog Section Contains a Record of Development	**5 / 5**	CHANGELOG records the Part 1 baseline and every Added/Changed/Fixed item delivered in Part 2.
References	**5 / 5**	lists Harvard-style references for fonts, CSS techniques and mapping resources used
